

21 December 2020 Statewide Data Set

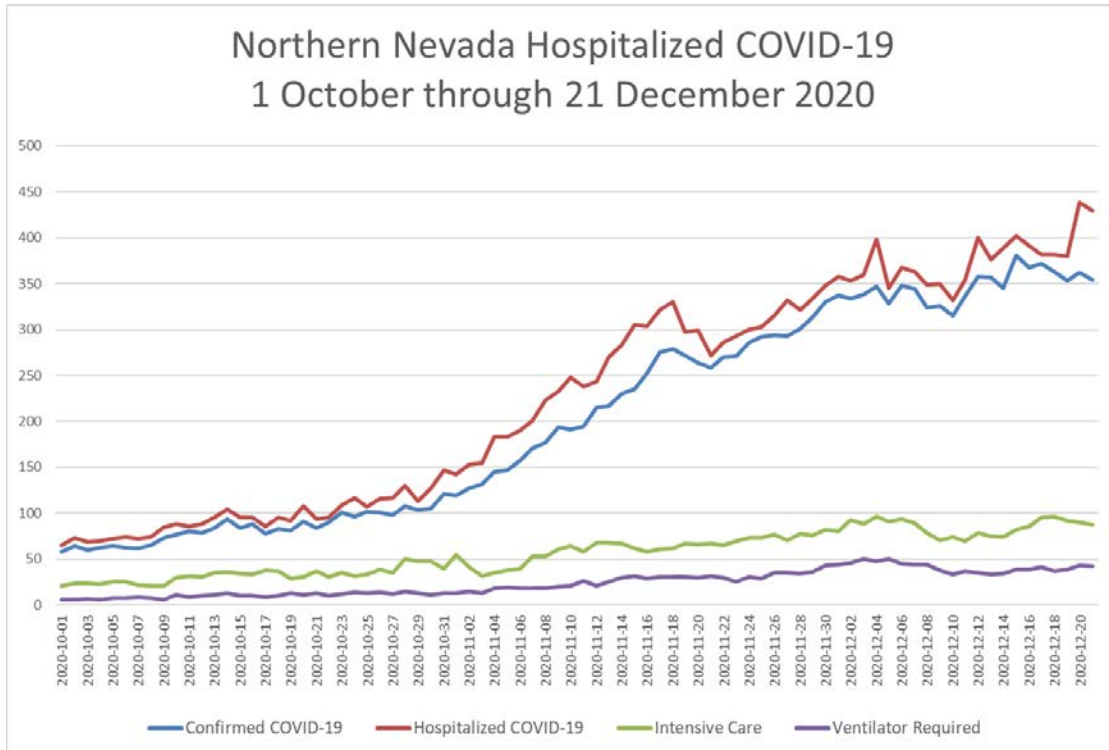

Nevada COVID-19 hospitalizations have been remaining stable for the past week. This has provided some breathing room for hospitals. However, because the numbers have leveled off at near the hospitalization high, additional capacity has not been appreciated.

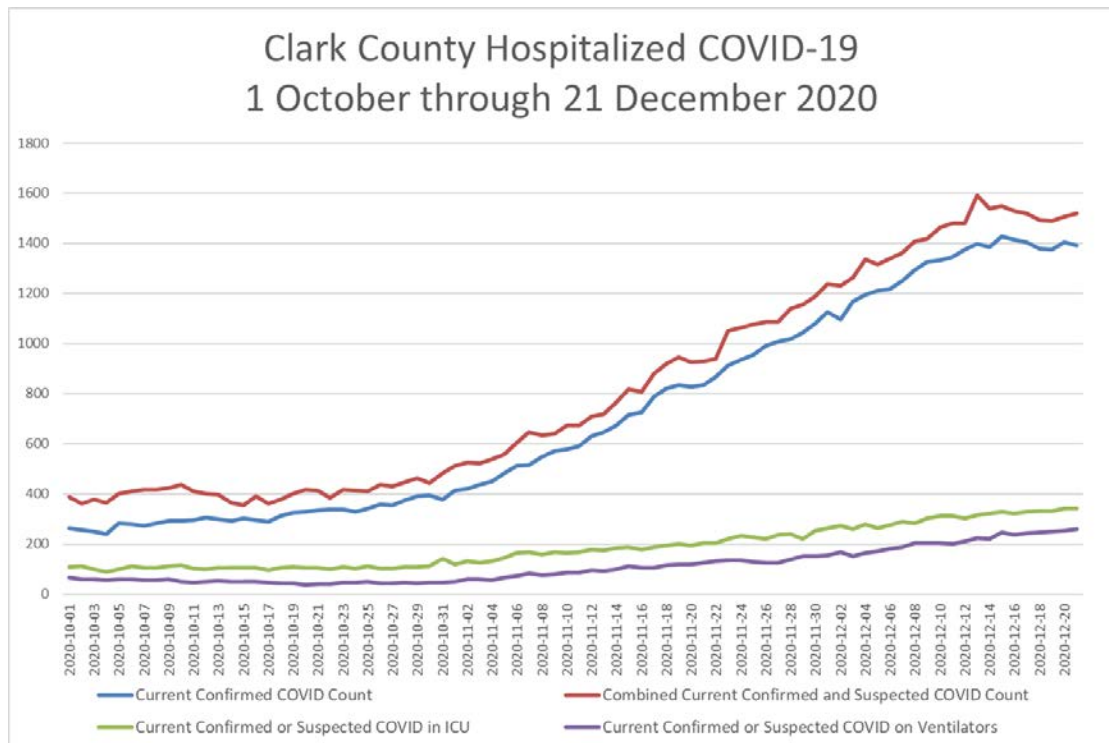

In the northern region, we are seeing a divergence between the Confirmed COVID-19 curve and the Hospitalized COVID-19 curves. This is the result of increasing suspected cases being hospitalized. In the past, seeing an increasing separation of these two lines

equated to testing supply logistics issue or other influence(s) that resulted in delayed COVID-19 test results. Further evaluation is warranted to determine the current causation.
