

7 February 2021 Statewide Data Set

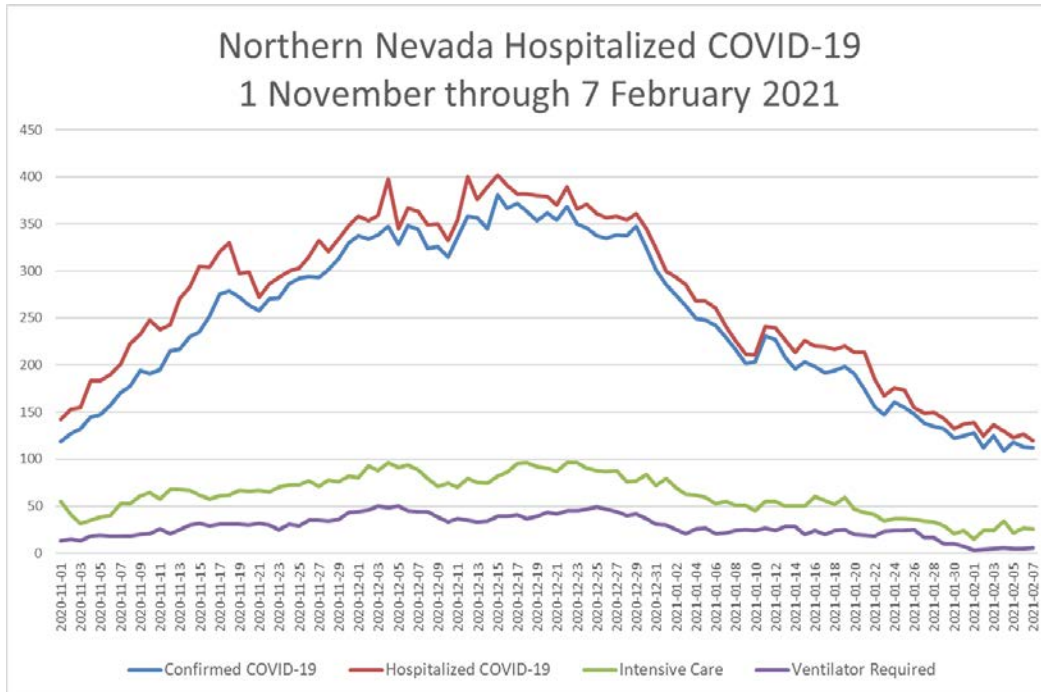

The number of hospitalized patients in Nevada continued to improve over the weekend. The case counts are now slightly below the last wave's peak. All trajectories are in decline. This good news does not mean that people should let their guard down. With case counts remaining near the previous wave's high, hospital capacity could quickly be stressed if the trajectories changed course.

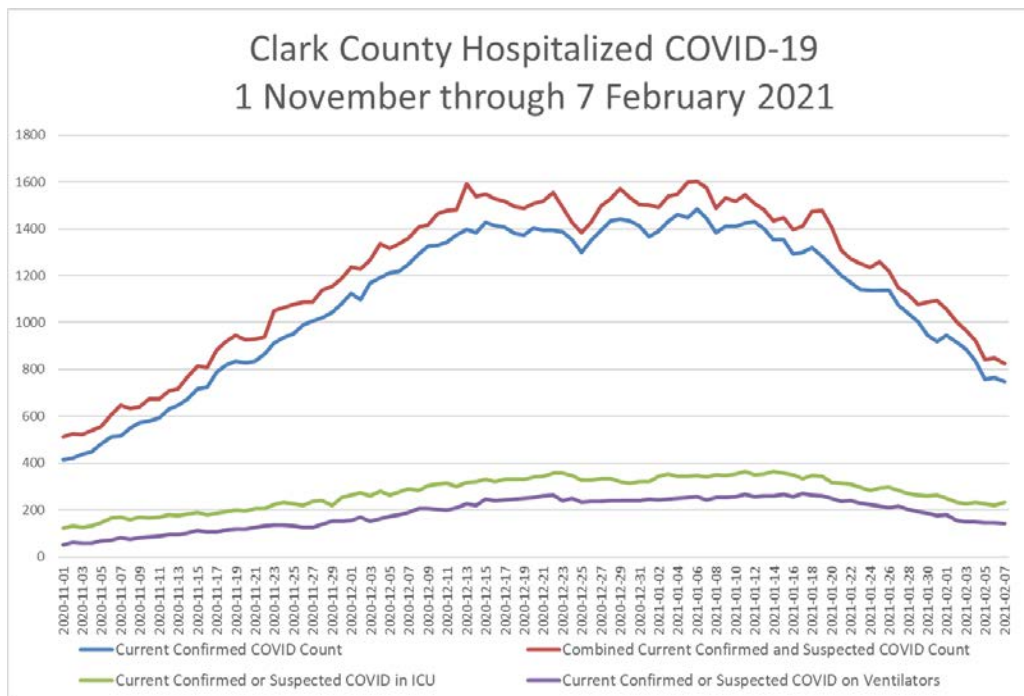

Hospitals are reporting available all-cause capacity within their wards and intensive care units, with some facilities having lower occupancy rates than others. PPE, supplies and equipment are currently in good condition.

The majority of hospitalized COVID-19 patients continue to be in the 50+ age groups.
